

Bearings Are Our Business

CARTER
Bearings Are Our Business

Your Resource for Precision Bearings

Standard Products

We maintain a large inventory of all of our standard bearings. This ready availability means we can meet your needs promptly — whether you want a batch shipment or just-in-time delivery.

Interchangeability

To ensure consistent performance, our standard bearings are designed to be fully interchangeable with those from other bearing manufacturers.

Responsiveness

If you have concerns about an application, we will get the answers you need as quickly as possible. Because we are precision bearing specialists, you can count on us for the information you need — from application suitability to new product development.

Custom Bearings

If you have a special application, we can modify one of our standard bearings to meet your needs exactly. Utilizing a proven design ensures that your custom precision bearing will give you the reliability you need.

Fast Delivery

Whether you are ordering a standard product or a custom design, you can count on Carter to deliver your order quickly. Our entire company is geared to respond rapidly to your time table.

Instead of just another source, Carter can be a resource for all your precision bearing needs. Our size and flexible structure enables us to respond rapidly to your requests. Our manufacturing processes can handle virtually any size order. Our quality control procedures ensure consistent tolerances, and our engineering expertise gives you a deep knowledge base to draw upon.

All Carter Manufacturing bearings are warranted to be free from manufacturing defects for the applications for which they are designed.

Carter reserves the right to update, revise or amend any information contained in this catalog, at any time, without notice, including any product data and/or specifications, and disavows any liability for such changes or for any typographical errors contained in this catalog.

Xtenda™

Stainless Steel Cam Followers and Cam Yoke Rollers

Xtenda™

Carter's Xtenda Series stainless steel needle bearings are available in both standard and custom sizes. You can order Cam Followers from stock in sizes 1/2 thru 2 1/2 and cam yoke rollers from 3/4 thru 2 1/2, with custom designs available for virtually any special application.

All standard Xtenda Series bearings are dimensionally interchangeable with standard cam followers and cam yoke rollers offered by other major manufacturers. But Carter bearings offer many advantages over other bearings. Our Seal Tight design minimizes contamination to keep your machinery running longer. We use a food-grade lubricant in our Xtenda Series bearings to ensure compatibility with any application. Other lubricants are also available. Our high precision manufacturing produces a bearing that can minimize expensive shutdowns due to bearing failure.

Hi-Roller™

Idler Rollers

HiRoller™

Hi-Roller bearings are designed for applications where both radial and thrust loading are present. They are available with either deep groove ball bearings or tapered roller bearings, and are capable of running at much higher speeds than needle bearing cam followers. These bearings are also available in yoke type configuration.

All Hi-Roller bearings are tightly sealed with an expansion plug on one end and radial contact lip seals on the bearings. This makes them ideal for use in environments where dust or high moisture is present.

Standard

Needle Bearing Cam Followers and Cam Yoke Rollers

Carter Standard Type bearings are easily mounted and ideally suited for many cam or track roller applications with moderate loading and shock. The bearings are sealed to help prevent contamination and retain lubrication. This Standard Type is recommended for applications where the stud hole can be accurately machined to within $+.0000$ " and $-.0005$ ". For other applications where these tolerances cannot be held to these limits, the Eccentric Type is recommended.

The outer race on Carter Cam Followers is high carbon chrome bearing steel through-hardened and ground. The studs and inner races are low carbon alloy steel carburized and induction hardened. A zone hardened raceway leaves the shank end ductile. The needle rollers are high carbon chrome bearing steel through-hardened and ground.

Carter Needle Bearing Cam Followers are available as sealed bearings with a slotted head, a hexagonal socket, or a crowned O.D. We also offer sealed or unsealed needle bearing Cam Yoke Rollers for supporting heavier loads

Sealed with Slotted Head

Type CNB-S is the Standard Type having a slotted head which normally supplies sufficient turning ability for installing this type of bearing.

Sealed with Hexagonal Socket

Type CNB-SB provides the ease of installing with a hex wrench which may be desired particularly on the larger sizes.

Sealed with Crowned O.D.

Type CCNB-S is recommended wherever variations in dimensions of alignment of the tracks or cam might cause excessive angular loading. It reduces thrust on the rollers and wear, and aids reliability.

Eccentric Stud

Type CNBE is designed for applications where holding close tolerances of the mounting holes may prove difficult. Available in slotted or hexed versions. The eccentric bushing is made of cold drawn steel so you can drill or dowel through the housing and into the stud for permanent locking. In most cases, the clamping action of the mounting nut is sufficient.

Needle Bearing Application Data

Lubrication

Carter Cam Followers and Cam Yoke Rollers are packed with a polymer type, lithium based grease containing corrosion resistant additives. This lubricant is suited to most bearing applications within a temperature range of 0°F to 250°F. Relubrication of the cam yoke rollers can be done through oil holes and the oil groove in the bore of the inner race. The mounting pin or shaft should be axially drilled and a radial hole drilled and matched with the hole in the race.

Provision for lubrication of the cam followers should be provided, where dimensions allow, through either end of the stud or through a cross drilled hole in the shank. The ends are counterbored to accept drive type lubrication fittings (not furnished). Each cam follower is supplied with grease plugs and these should be press fit into unused holes in the end of the stud. When not used, the cross hole is normally blocked when the cam follower is installed in the housing.

The following drive type fittings are recommended for lubrication of the CNB type cam followers:

CNB - 1/2" to 1 1/16" - 1/8" Alemite No. 3019 (Roller end only on these sizes.)

CNB - 3/4" to 2" - Alemite No.'s 1728-B, 4633, 1645-B, 3005, 3006, 3009, 3012-B

CNB - 2-1/4" to 2-3/4" - Alemite No.'s 1743 or 1743-B

Mounting Cam Yoke Rollers

The recommended shaft diameters shown in the Selector Chart provide for either a slip or press fit. The shaft should be heat treated and press fit in the bearing bore for heavily loaded applications.

With moderate loads and a hardened shaft, a slip fit is sufficient. A slip or push fit and an unhardened shaft can be used in light load applications.

Endwise clamping of the cam yoke rollers should be provided to prevent axial movement and displacement of the end washer. A flat housing shoulder, which is square with the centerline of the bearing, should be provided for holding the washer. This should be at least as large as the minimum clamping diameter shown in the chart to provide adequate washer support.

Comparative Type Number Changes For Added Features

For	Carter	McGill	RBC	Torr
Unsealed	Omit S from Suffix Type No. Example: CNB-16	Same as Carter Example: CF-1/2	Omit L from Suffix Type No. Example: S-16	Omit S from Suffix Type No. Example: CR-8
Crowned O.D.s with Seals	Add C on Prefix Type No. Example: <u>C</u> CNB-16-S	Same as Carter Example: <u>C</u> CF-1/2-S	Same as Carter Example: <u>C</u> S-16-L	Same as Carter Example: <u>C</u> CRS-8
Hexagonal Socket (instead of Slotted Mounting Hole) with Seals	Add B to Suffix Type No. Example: CNB-16- <u>S</u> B	Same as Carter Example: CF-1/2- <u>S</u> B	Add W to Suffix Type No. Example: S-16- <u>L</u> W	Add B to the end of Prefix Type No. Example: CRS <u>B</u> -8
Eccentric Stud With Seals	Add E to end of Prefix Type No. Example: CNB <u>E</u> -16-S	Same as Carter Example: CF <u>E</u> -1/2-S	Add X to Suffix Type No. Example: S-16- <u>L</u> X	Same as Carter Example: CR <u>E</u> -8
Heavy Stud Cam Followers	Add H to end of Prefix Type No. Example: CNB <u>H</u> -16-S	Same as Carter Example: CF <u>H</u> -1/2-S	Prefix is H Example: <u>H</u> -16-L	Same as Carter Example: CRS <u>H</u> -8

Note: The Type Number may indicate several different extra features. For example: pertaining to Carter Bearings, an Eccentric Stud Bearing with a Crowned O.D. would be indicated by a C in front of the type designation for the Crowned O.D., and an E would be added for the Eccentric Stud, making the Type Number CCNBE.

Neverlube™

Cam Followers and Cam Yoke Rollers

Carter's advanced design self-lubricating sleeve bearing provides continuous, dependable lubrication for the life of the unit. This advanced design self-lubricating sleeve bearing has a heat-treated steel roller with machined lubrication reservoirs that are pre-filled with specially developed lube mixtures. As the bearing operates, this lubrication penetrates through a porous inner sintered bronze bushing by capillary action providing continuous, dependable lubrication for the life of the bearing.

The permanent lubrication not only eliminates leakage due to over-lubrication, but the plastic lube mixture reverts to its original consistency when the bearing is not in use, preventing any leakage. This is an important advantage in applications such as food processing and pharmaceutical manufacturing. Because there are no internal moving elements, Neverlube bearings offer trouble-free operation in a wide variety of applications, including situations where the equipment is subject to frequent wash downs.

Application Information

Neverlube bearings offer many important benefits to engineers who are developing new equipment for special applications, or redesigning existing equipment to achieve competitive advantages such as lower cost and longer service life.

Continuous Self-Lubrication

Continuous self-lubrication is an important advantage, particularly in applications where lubricating the bearing is inconvenient, difficult, or even impossible, or where dirt, dust or other contaminants can seep in causing needle, roller or ball bearings to "seize up."

Because there are no internal moving elements, Neverlube Bearings can be trouble-free in high humidity applications or where the equipment may be subject to frequent "wash downs," as in food processing plants.

Lower Cost

The simplified design of Neverlube bearings can mean lower cost — The self-lubricating feature also helps reduce maintenance costs and assures adequate lubrication at all times, greatly reducing the possibility of bearing failure and unscheduled downtime. In addition, the Hex Socket, which is an important aid to easy installation and replacement, and which is normally an "extra," is included at no extra cost.

Clean Lubrication

Neverlube bearings not only eliminate the problem of lubricant leakage due to over-lubrication, but the plastic lube mixture reverts to its original consistency when the bearing is not in use preventing any leakage from this source. This "clean" lubrication is an important advantage, particularly in applications such as food processing plants, and is a desirable feature in many other applications.

Interchangeability

Neverlube Bearings are interchangeable with standard types of needle roller bearings dimensionally and otherwise. (See Interchangeability Charts.) So you can frequently have the self-lubricating features of Neverlube bearings and also save money on many of your present bearing applications.

Temperature Range

The Standard Neverlube Lubricant has an ambient temperature range of +30° F to +150° F.

This is normally supplied and is suitable for most applications. In addition, the following special lubricants can be supplied on request for other applications.

— Synthetic High Temperature Lubricant -Range -40° F to +330° F

— Synthetic Low Temperature Lubricant - For applications requiring low temperature specifications down to -80° F.

Neverlube Application Data

Application Data

Neverlube Bearings are particularly well suited to applications with light to moderate loads operating at medium to higher speeds... although they have been successfully used in many other applications. Frequently, the best means of determining this is to try sample bearings in your application.

They are not normally recommended, however, for applications with:

- Extra heavy loading at static or slow speeds;
- Heavy shock loads in conjunction with slow speeds or vibrating conditions;
- Constant high ambient temperatures in excess of 200° F unless supplied with the special high temperature lube.

Frequently, the best way is to compute the load and see if it conforms to your application, then try a sample and see how it performs. Some difficult conditions are so infrequent as not to pose a problem.

Some of the typical applications of Neverlube Bearings are:

Food Processing Machinery which is often subject to frequent wash downs. Here the lack of moving parts and the “clean” self-lubricating features of Neverlube Bearings are particularly valuable.

Farm and Construction Machinery which often are subjected to a great deal of dust and grime which tends to clog other bearings.

Machine Tools and Metalworking Machinery where the bearings are often inaccessible and subject to chips, coolants and grime that can clog other bearings.

Packaging Machinery - As with Food Processing Machinery, the clean self-lubricating feature of Neverlube Bearings is particularly desirable in many of these applications. And many others.

Load Data for Cam Followers & Cam Yoke Rollers

Because of their special design, Neverlube Cam Followers and Cam Yoke Rollers have a PV factor of 80,000 on which the following is based. To determine the safe load capacity for a specific load and RPM use the load factor shown on the catalog data page in conjunction with the following table:

RPM	Unit Load PSI
Slow & Intermittent.	4,000 Lbs.
150 to 300 RPM.	2,000 Lbs.
300 to 600 RPM.	600 Lbs.
600 to 900 RPM.	400 Lbs.
900 to 1200 RPM.	300 Lbs.
For higher RPM - Consult Factory	

EXAMPLE:

SFH-40-A Cam Follower At 800 RPM = .391 (Load Factor) x 400 = 156.4 Lbs. Capacity.

Shock Factors

The load ratings given are based generally on uniform or steady loading. If the loading is of shock nature, the following factors should be divided into the bearing capacity.

Type of Load	Factor
Uniform and Constant	1.0
Light Shock	1.5
Moderate Shock	2.0
Heavy Shock	3.0

Lube Reservoir

NEW

Cam Followers and Cam Yoke Rollers

Polycoated Bearings

Carter has added a complete new line of polycoated bearings. Polycoated bearings can be used for standard and specialized applications where noise reduction, reduced wear and non-marking are important factors in operations.

- Food-grade polyurethane available on stainless bearings
- Reduced wear on cam tracks
- Other colors/durometers available
- Noise reduction
- Non-marking material
- Improved traction
- Short lead times

Chrome Plated Needle Bearing Cam Followers

- Stainless steel needles
- Corrosion resistant
- Wear resistant
- Available from stock

NEW Needle Bearing Cam Followers - Chrome Plated

Needle Bearing Cam Followers - Chrome Plated

**Clamping torque is based on dry threads. If threads are lubricated, use half of values shown.

Special Bearings

Special Applications

If you have a special application you can count on Carter to deliver the high precision bearings you need, when you need them. Unlike larger bearing manufacturers, Carter specializes in custom bearings. So we can respond to your design and scheduling requirements, often at a lower cost.

We can modify any of our standard, proven high precision bearings to give you the exact design features you want:

- custom materials and finishes
- high/low temperature modifications
- special relube port options
- stud configurations
- special laser-etched markings
- and more...

Just send us your data, drawings or sketches on the types needed and quantities required – we will promptly send you a quote. We have the capacity to make custom bearings in any quantity, including samples for your evaluation and testing on your equipment. And we make a special effort to supply samples as promptly as possible – at moderate cost.

We have produced an exceptionally wide range of special types, including variations of Neverlube Bearings, and various types of Needle, Ball and Roller Bearings, many of them with special features. For example, one special type bearing was developed for garbage truck loaders. Since this involved very severe service with a great deal of dust and grime, frequent weather changes, and intermittent heavy shock loads on the loading device, a very special bearing with a heavy seal was produced for this need and has worked very satisfactorily.

If you have a special bearing need, contact Carter. We know how to meet all your requirements.

Special Bearings

Cam Followers and Cam Yoke Rollers

Double Row Needle Bearings

for packaging equipment. Two rollers operate independently of each other. Outer rollers are chrome-plated.

Stainless Steel Hi-Roller™

for use in seafood processing plant.

Metric Needle Bearings

with modified outer width and special re-lube option.

Urethane Coated Cam Followers

for a transfer system. The urethane coating cushions the parts rolling down the assembly line, preventing damage.

Needle Bearings with Grooved Outer Races

for tracking used on a materials handling applications.

Special Bearings (continued)

Roller Lifter

Delrin Outer with Stainless Stud
for use in pharmaceutical manufacturing.

Ball Bearing
with stud used as guide.

Chain Sheave & Mast Guide Rollers
for use on fork lift mast.

Band Saw Guides

Xtenda™ Stainless Steel Cam Followers & Cam Yoke Rollers

Stainless steel construction ideal for chemical, food, and harsh-environment applications.

Hi-Roller™ Cam Followers and Cam Yoke Rollers

Available with either deep groove bearings or tapered roller bearings, they are capable of handling combined radial and thrust loads.

Standard Needle Bearing Cam Followers

Available sealed with slotted or hex socket heads. Crowned version available for applications with track alignment variations.

Standard Needle Bearing Cam Yoke Rollers

Allow “through-support” and greater load handling capacity since stud deflection is not a consideration.

Eccentric Stud Cam Followers

The perfect choice for applications where you need to account for slight variations in mounting hole location.

Heavy Stud Cam Followers

When you need high deflection resistance but your design won't allow a cam yoke roller and through-shaft.

Neverlube™ Cam Followers and Cam Yoke Rollers

Economical sintered bushing design with large lube reservoirs for dependable long-term performance.

Special Bearings

A wide range of special options in combinations including double row bearings, special outer race profiles, metric, stainless and composite materials.
